

HR TailorMade: what we found, and how we would help

Prepared for your Marketing Specialist and Executive Assistant opening · September 17, 2026 · Public checks of hrtailormade.com

IN ONE PARAGRAPH

HR TailorMade already has a strong base for lead generation: a fast GoHighLevel site, GA4, live chat, an email signup, clear service pages and Dr. Tiffany's media page all indexed. The gaps are in tracking and search cleanup. We could not see a Meta Pixel, and a public search still shows an old homepage address that now returns an error. For a firm that wins clients through trust, those loose ends are worth tidying before lead generation scales.

WHAT IS ALREADY WORKING

- The GoHighLevel site loads over HTTPS in about half a second on our check.
- GA4, live chat and an email signup are installed, and structured data is present.
- Service pages, case studies, the blog and the media page all appear in a public search of your domain.
- Facebook, Instagram, TikTok, YouTube and LinkedIn are linked from the site.
- The headline "Fractional HR Support for Nonprofits" is clear.

FINDINGS BY RISK

Old page in search	Medium	A public search of your domain still lists www.hrtailormade.com/home-1-1 as "Human Resources Consulting, Strategic Planning", and that address now returns a not found error. A prospect who clicks that result lands on an error page. A redirect to the homepage fixes it.
Ad tracking	Medium	We could not see a Meta Pixel in the homepage code. Without it, nobody who visits from Facebook or Instagram can be retargeted, and paid campaigns cannot be measured against booked consultations.
Duplicate homepage	Low	hrtailormade.com/home loads the same page as the homepage. Two addresses for one page split search signals. A redirect or canonical tag keeps them together.
LinkedIn	Low	The LinkedIn link on the site goes to Dr. Tiffany's personal profile rather than a company page. Nonprofit and small business buyers often check the company page too. Linking both covers it.
Image alt text	Low	10 of the 22 homepage images have no alt text. Alt text helps accessibility, which matters for a firm advising organisations on inclusive workplaces.

WHAT WE WOULD DO FIRST

- Keep Dr. Tiffany's inbox, calendar and follow ups moving every day, with a short daily summary.
- Clean up the GoHighLevel pipeline so every lead has a next step and nothing sits untouched.
- Design social graphics, one pagers and presentations in Canva and Adobe on brand.
- Build a lead generation rhythm for nonprofits and small businesses, tracked from first touch to booked call.
- Fix the old search result with a redirect and confirm the Meta Pixel before any paid push.

A USEFUL WAY TO START

If you bring us on for this role, the first week includes a written review of your GoHighLevel pipeline and follow up workflows, with anything stalled or duplicated flagged, at no extra cost.

WHO WE ARE

Balay ni Bruno & Co. is a small operational support studio. You hire one person and get a team behind them: websites, email, social content, CRM automation and reporting that all speak with one voice.

- We build and maintain GoHighLevel for Freccia Construction, a custom builder in Austin, Texas: CRM, email, workflows and follow up, plus social content and paid ads.
- For JR Signing Services, a Texas notary signing agency, we built a lead database of 1,800+ contacts and run daily email and LinkedIn outreach.
- RJ served as Marketing Director at Top Producer Investment Capital.

HOW WE CHECKED

Checked from the outside on September 17, 2026: homepage code and headings, tracking tags, robots.txt and sitemap, structured data, image alt text, linked social profiles, a public site search of your domain. We did not log in to anything and we have no access to your analytics or ad accounts, so anything below marked not checked is exactly that.

- Your GoHighLevel account, HoneyBook and SmartSuite.
- Your GA4 data and any ad accounts.
- Page speed scores, because Google's PageSpeed service did not respond during our check.
