

Cushion Tree: what we found, and how we would help

Prepared for your Social Media & Marketing Specialist opening · September 16, 2026 · Public checks of cushiontreecenter.com

IN ONE PARAGRAPH

You already have the hardest part of a content engine built: real teaching and free offers people can sign up for. What is missing is the path between them. A public search of your domain currently shows only your contact page, so someone who finds you on Instagram and searches your name may never reach your courses. Fix that path and every Reel starts doing double duty.

WHAT IS ALREADY WORKING

- The Kajabi site loads over HTTPS with a mobile viewport set.
- Google Tag Manager is installed.
- Your page title and description clearly say what Cushion Tree offers.
- Free offers are already live, including Loving Detachment, Meditation Basics and 6 Weeks to Steady.
- Facebook and Instagram are linked from the site.

FINDINGS BY RISK

Search visibility	High	A public search for pages on your domain returned only your contact page. People who discover you on social usually search your name next. If your courses and free offers do not show up, that interest ends at the contact page. Worth confirming in Google Search Console.
Homepage heading	Medium	The homepage has no H1 heading. Search engines use the main heading to understand a page. Your title tag says what you do, but the page itself does not.
Ad tracking	Medium	We could not see a Meta Pixel in the page code. Tag Manager is installed, so it may load from there. Without it you cannot build an audience of people who watched your Reels and visited a free offer page. A two minute check confirms it either way.
Sitemap	Low	Your sitemap exists but is not referenced in robots.txt. Search engines find sitemaps faster when robots.txt points to them. Submitting it in Search Console does the same job.
Image alt text	Low	3 of the 4 images on the homepage have no alt text. Alt text helps accessibility and gives search engines more context.

WHAT WE WOULD DO FIRST

- Turn what you teach into a weekly content plan: each question students ask becomes a Reel, a carousel and an email section.
- Point every post at one of your existing free offers, so social grows the email list instead of just likes.
- Submit your sitemap in Search Console, add a clear homepage heading, and confirm the pages are indexed.
- Confirm the Meta Pixel and GA4 inside Tag Manager so you can see which posts bring sign ups.
- Review simple analytics with you each month and adjust the plan.

A USEFUL WAY TO START

If you bring us on for this role, the first week includes a 30 day content plan built from your existing teaching and free offers, with a list of the exact footage we need from you, at no extra cost.

WHO WE ARE

Balay ni Bruno & Co. is a small operational support studio. You hire one person and get a team behind them: websites, email, social content, CRM automation and reporting that all speak with one voice.

- We run social content for Freccia Construction, a custom builder in Austin, Texas, including weekly Reels.
- We run marketing for a readings and spiritual guidance business, where the brand rule is warm, helpful and never overpromising.
- Our live client websites include woodenwoodworks.com, srivierehair.com, jrsigningservices.com and frecciagroup.com.

HOW WE CHECKED

Checked from the outside on September 16, 2026: homepage code and headings, tracking tags, robots.txt and sitemap, image alt text, linked social profiles, a public site search of your domain. We did not log in to anything and we have no access to your analytics or ad accounts, so anything below marked not checked is exactly that.

- Your Kajabi analytics, email list and Instagram insights.
- What is configured inside Google Tag Manager.
- Page speed scores, because Google's PageSpeed service did not respond during our check.
