

# Guiltless Girl: what we found, and how we would help

Prepared for your Shopify VA (Operations and Social Media) opening · September 16, 2026 · Public checks of shopguiltlessgirl.com

## IN ONE PARAGRAPH

For a new store, a lot is already right: a fast Shopify build, at least 250 products live, an email signup, and a founder story on the homepage that makes the brand personal. The two biggest gaps are about being found. A public search of your domain returned nothing yet, and the homepage does not link to an Instagram or Pinterest profile, the exact channels you are hiring for.

## WHAT IS ALREADY WORKING

- The Shopify store loads over HTTPS in about 1 second on our check.
- At least 250 products are published, and email signup is live.
- Structured data is present and the sitemap is referenced in robots.txt.
- The founder note "Hi, I'm Michelle" and the promise "Clean. Vetted. Done." give the store a real voice.
- 66 of the 71 homepage images have alt text, and the footer is current for 2026.

## FINDINGS BY RISK

|                   |        |                                                                                                                                                                                                                                                                            |
|-------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Search visibility | High   | <b>A public search for pages on your domain returned no results.</b><br>Nobody searching for clean beauty can find the store yet. Submitting the sitemap in Google Search Console is the first step, and it takes minutes.                                                 |
| Social links      | High   | <b>The homepage does not link to an Instagram or Pinterest profile.</b><br>Visitors cannot follow you, and influencers checking the brand for affiliate outreach cannot see your social.                                                                                   |
| Tracking          | Medium | <b>GA4, the Meta Pixel and the Pinterest tag are not visible in the page code. Shopify can load them through customer events, which do not show from outside.</b><br>Without them you cannot see which posts or pins bring buyers. Worth confirming in your Shopify admin. |
| Headings          | Medium | <b>The homepage has three H1 headings: "Guiltless Girl", "Clean. Vetted. Done." and "Hi, I'm Michelle."</b><br>One main heading tells search engines what the store is. The others work well as subheadings.                                                               |
| Image alt text    | Low    | <b>5 of the 71 homepage images have no alt text.</b><br>A quick fix that helps accessibility and image search.                                                                                                                                                             |

## WHAT WE WOULD DO FIRST

- Submit the sitemap in Google Search Console and confirm your pages start to index.
- Add Instagram and Pinterest links, and claim your website on Pinterest so pins get attribution and analytics.
- Build a product listing template for descriptions, images, collections and dropship supplier details.
- Create Canva templates from your brand kit for quote posts, carousels, pins and stories.
- Research influencers who fit clean beauty for affiliate outreach.

## A USEFUL WAY TO START

If you bring us on, the first week includes the Search Console setup, the sitemap submission and the social links added to your store, at no extra cost.

## WHO WE ARE

Balay ni Bruno & Co. is a small operational support studio. You hire one person and get a team behind them: websites, email, social content, CRM automation and reporting that all speak with one voice.

- We build and run Shopify stores, including [srivierehair.com](https://srivierehair.com) for a haircare brand we work with now, where we also run creator outreach.
- RJ previously led the Shopify build, product listings, graphics and influencer outreach for Crown Limited Supply.
- We run social content, including Canva graphics and weekly Reels, for Freccia Construction, a custom builder in Austin, Texas.

## HOW WE CHECKED

Checked from the outside on September 16, 2026: homepage code and headings, tracking tags, robots.txt and sitemap, structured data, image alt text, linked social profiles, a public site search of your domain. We did not log in to anything and we have no access to your analytics or ad accounts, so anything below marked not checked is exactly that.

- Your Shopify admin, apps, customer events and supplier setup.
- Your Instagram and Pinterest accounts.
- Page speed scores, because Google's PageSpeed service did not respond during our check.
