

THE COMPLETE GUIDE

Walkable 3D Tours

Let your clients walk through their project, right in a browser, before a single wall goes up.

WHAT IT IS

A real walk-through of a space that does not exist yet

We take your project and turn it into a tour your client can walk through themselves, moving room to room, looking around, getting a true feel for the space. It opens with one link. No app to install, no headset, nothing to download. It works on a laptop or a phone.

Most people only see their future home as flat drawings or a single rendered picture. This is different. They *walk* it. And a client who can walk the space is a client who can picture living there, and say yes with confidence.

Who it is for

Custom home builders

Remodelers

Real estate & developers

Architects & designers

The short version

You hand us what you already have. We hand you back a link your client can walk through. That link helps you close the job.

Start from whatever you already have

You do not need anything fancy. We can build the walkable tour from any one of these.

1. A sketch or an idea

A rough floor plan, a napkin sketch, or just a description of the layout. We model it from there.

2. Your existing 3D model

Already have a SketchUp or CAD file from your designer or engineer? We convert it straight into a walkable web tour.

3. A quick phone video

Walk a finished space with your phone for a minute. We turn that footage into a 3D scene people can explore.

The process, start to finish

1

Capture

You send us a sketch, a model file, or a phone video. We confirm the real-world scale so the space feels true to size.

2

Convert

We turn it into clean 3D, in-house, then drop it into our walkable viewer built for the web.

3

Set the scene

We add the walk controls, a starting point, a smooth path, and the lot boundary so it feels like a real tour, not a clunky model.

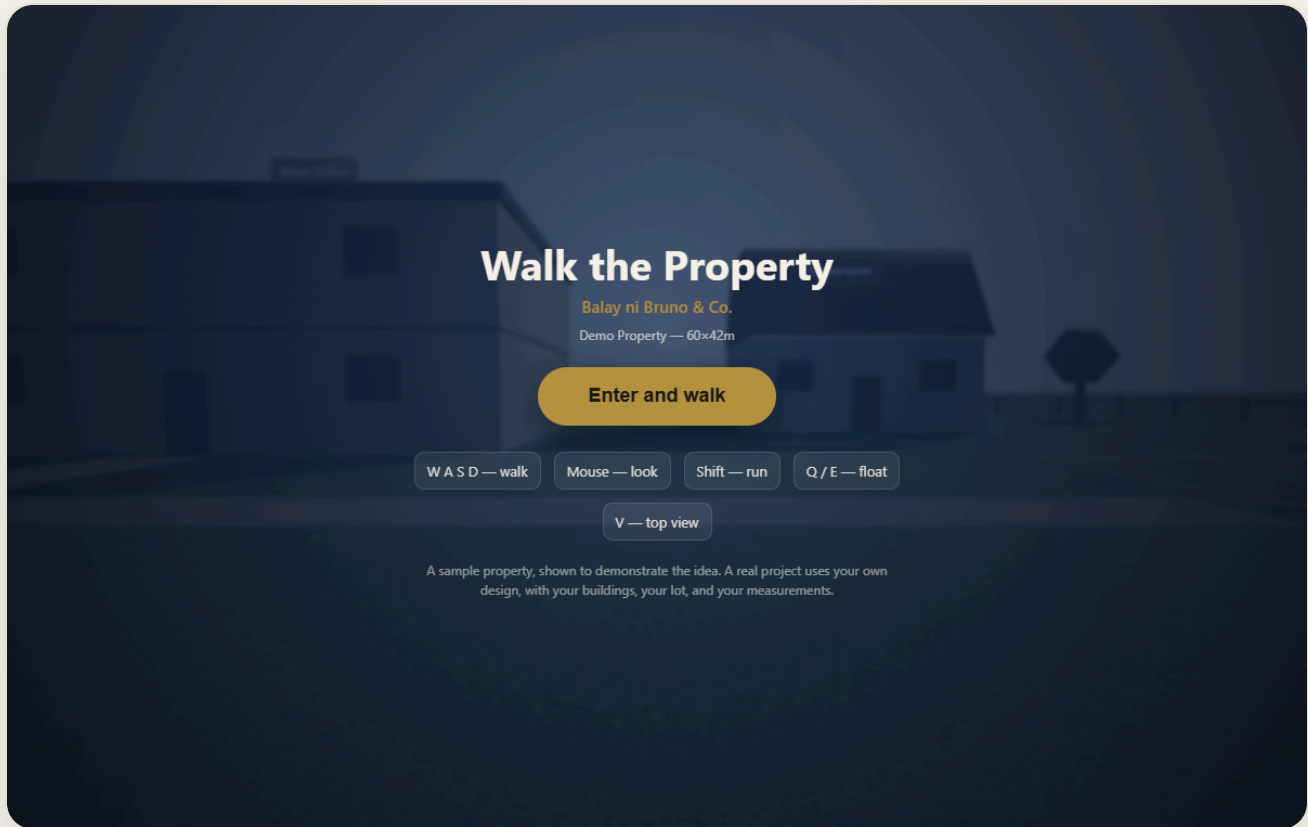

4

Share a link

You get one link to send your client. They open it and walk through. We can update it any time the design changes.

Turnaround: most tours are ready in days, not weeks, because the whole pipeline is ours. No third-party software, no per-seat fees.

It opens like this, in any browser

- **One click to enter** and start walking. No app, no sign-up.
- **Walk and look freely** with simple controls, or jump to a top-down view of the whole property.
- **True to scale**, built from your real measurements, so the rooms feel the right size.
- **Works on a phone or laptop**, anywhere, so clients can tour from the couch.

It is not a gimmick. It closes jobs.

For builders

Sell the home before it is built. Clients commit faster and ask for fewer changes once they have walked it.

For remodelers

Show the "after" next to the "before". The client sees exactly what they are paying for.

For real estate

Let buyers tour a listing or a future development from anywhere, day or night, without a showing.

For your brand

Almost no one in your market offers this. Handing a client a walkable tour makes you look a step ahead, because you are.

"A buyer who can walk the home is a buyer who can picture living there."

WORK WITH US

Want one for your next project?

We build the whole thing for you, from your sketch, model, or video. Even just to see it in action, we are happy to put a quick demo together. We are a small, family-built studio, and we treat your work like our own.
